

Prof. R. Wyburn-Mason
2 Hillbrow
Richmond Hill
Richmond, Surrey
ENGLAND

4th August 1980

Dear Prof. Wyburn-Mason,

For your information I attach copy of letter from Dr. Morris and my reply which is self explanatory.

Hope you think I wasn't too strong but it's about time someone told these people here a few home truths!

Kindest regards,

Terry Crommelin

STRICTLY CONFIDENTIAL

Brian J. Morris, Ph.D.,
Lecturer in Physiology,
Department of Physiology F13,
University of Sydney,
SYDNEY NSW 2006

Dear Dr. Morris,

Your letter of 23rd July to hand. Any hostility you read in my letter was only due to a non-acknowledgment of receipt of the book which in my opinion, and obviously not shared by you, is the forerunner of some wonderful breakthrough in the cure of Rheumatoid Arthritis. As a sufferer I would have thought that any treatment that medically was not harmful, would be worth a try.

My experience and my meeting with Prof. Wyburn-Mason was due to my youngest daughter who contracted Arthritis at the age of two or three, and a Rolls Royce driving Rheumatologist in Perth put her on CORTIZONE and anti-inflammatory drugs, that is how she was treated for thirteen years. At this stage her spine had lost strength, the weight of her shoulders and head had caused her spinal column to be a figure "S". We heard of Prof. Wyburn-Mason, I phoned him and as a result my wife and daughter departed for London where she was treated with CLOTRIMAZOLE, a drug not known for such treatment. Because of impurities Prof. Wyburn-Mason changed to FLAGYL and later a few years ago to the PFIZER product FASIGYN 500.

My daughter is now eighteen, stunted, in a wheelchair for ninety percent of the time and the distortion caused by the disease has permanently damaged her fingers and some of her joints; her spine is still an "S". But Dr. Morris, she has no pain and she only now takes 4 x FASIGYN 500 every three months (2 one night and two the following night). I have another daughter Victoria who was diagnosed at the age of one as a Coeliac. She was put on a diet, examined at Royal Perth Hospital some three years ago who said she was a very severe case and unless she stuck rigidly to her diet serious consequences would eventuate.

Prof. Wyburn-Mason, as he states in his book, links Rheumatoid Arthritis, Coeliac, Psoriasis and other problems as being very closely related. Vicki was put on FASIGYN treatment of 8 tablets per month (4 one night and 4 the following night). Her last biopsy revealed the complete disappearance of the problem despite the fact she went on a two month diet free eating activity including pasta, cakes etc; she is healthy and cured.

I can go on and explain how my friends with "frozen shoulders," (a medical term) have taken limited doses of FASIGYN 500 and are back swinging the golf stick and feeling flexible. One of my Director's wives could not stoop in the garden with her joint pain, she is also on minimum regular 3 or 4 monthly doses and is feeling "No. 1". Her sister with a severe arthritic hip can now get in and out of the car.

Of course Dr. Morris this is all coincidental, it is not as you quote "information received from proper clinical trials in Australia". I can't stop you from inflicting yourself with unnecessary suffering, if FASIGYN 500 is a dangerous drug well

don't take it, but if it's not why not give it a try?

Prof. Wyburn-Mason I am sure will be pleased to receive any correspondence from you or your friends, he is far from narrow in his outlook and he has given the latter twenty years of his life to this problem without any personal gain of wealth. By the way when Jenny's problem was conveyed over the phone to him (that is before she went to England), he asked whether her mother's mother or father had been sufferers, they both had and Prof. Wyburn-Mason's theory is these are hereditary and from the experience I have noticed here, that seems to be true.

Thanks for returning the book. Yours faithfully,

Terry Crommelin
